- \* Typescript
- \* React
- \* Git Workflow
- \* Photoshop
- \* Vite

## PROFILE

I am former dentist turned junior frontend developer with passion for creating user-friendly web application.

## WORK EXPERIENCE

### Prosthodontic/Cosmetic dentist

Private Practise | 2018 - 2022

As a Prosthodontic/Cosmetic Dentist, my main occupation revolves around restoring and enhancing patients' oral health and smiles. I specialize in designing complex treatment plans for full oral rehabilitation and dental procedures aimed at improving aesthetics. My daily tasks involve analyzing and discussing each patient case with my colleagues, dental technicians, and patients to develop personalized treatment plans and ensure quality control in implementation. It is a rewarding field that requires meticulous attention to detail, strong interpersonal skills, problem-solving skills, and a passion for creating beautiful and functional outcomes.

### Learner

"Udemy" and "The Odin Project" | December 2022 - Present

After researching, I chose web development, starting with Python. However, I found backend development less engaging. I switched to JavaScript, focusing on front-end work from December to January. I discovered The Odin Project and dedicated 10-13 hours daily to learning. I nearly completed their front-end content and supplemented it with a Udemy course on HTML, CSS, and JavaScript. Currently, I'm focused on refining my ReactJS and TypeScript skills. I continue learning through The Odin Project and staying updated with documentation and new Udemy courses to explore advanced topics.
